

Sample Content Ideas

This document shows you what to expect when you ask Claude for content ideas using the `secondkind-bold-organic` skill.

How to read each example:

1. We start with a real customer complaint pulled from the matrix
2. You see the exact prompt you'd type into Claude
3. You see the three content ideas Claude would suggest back

The three ideas are intentionally different. Claude gives you variety so you can pick the right one for your week, a quick scroll-stopper if you're short on time, a heavier emotional piece if you've got more bandwidth, a brand-positioning post if it's a Monday and you need to anchor the week, etc.

After the 10 examples, the final section shows you what happens when you pick one of the ideas and ask Claude for the full details ("go deep on #2").

Example 1: *"60 days on a probiotic, nothing changed. Cancelled my order."*

Matrix entry: `pain-001`

You type:

Use secondkind-bold-organic. Give me 3 variations for pain-001.

Claude gives you 3 ideas:

Idea 1: A bold statement post (Instagram)

A clean square Instagram post with the headline:

"We're not probiotics. We don't want to be."

Below it, three short proof lines: - Most probiotics don't survive your stomach acid. - The ones that do don't colonize. - We send the compounds your gut actually uses, already active.

What it looks like: A casual phone-snap photo of a kitchen counter at morning, with the text laid over the empty upper part of the photo. SK Bold wordmark in the corner.

Why it works: Customers who've already cancelled don't want another sales pitch. They want validation that giving up was rational. This post says "the whole category was the problem" in four lines.

Idea 2: A long letter video (TikTok)

A short video where text appears line-by-line over silent footage of a kitchen at evening. Reads like a personal letter to the customer who just quit.

Opens with:

Listen, to the women who cancelled their probiotic at month two.

It then walks through why probiotics plateau (the bacteria die in stomach acid, the survivors can't colonize an established gut) before introducing postbiotics as the alternative.

What it looks like: Silent B-roll, a hand opening a probiotic bottle, a half-eaten dinner plate, a kitchen at dusk. No talking, just the text telling the story.

Why it works: When customers feel betrayed by a product, a long validating letter does what a short post can't, explains the WHY behind their disappointment.

Idea 3: A 60-second AI talking-head video

The recurring SecondKind Bold AI avatar (the same woman who appears in every AI video) speaks directly to camera across 5 quick scenes:

1. *"I cancelled my probiotic at day 47. Three years of paying \$50 a month for nothing."*
2. *"Clean eating, walks at lunch, I did everything. Nothing changed."*
3. *"Turns out 70% of probiotic bacteria die in stomach acid. The few survivors can't colonize. It wasn't me. It was the model."*
4. *"So I switched to postbiotics. The compounds bacteria make, already active."*
5. *"Two weeks in. I forgot I was even taking anything."*

What it looks like: An AI-generated woman in a kitchen. Same face, same kitchen, same lighting across every video we make using this format.

Why it works: A first-person confession lands harder than a static post. And because the avatar is the same woman across many videos, viewers start recognizing her, that's the brand recall engine.

Example 2: “Nothing like how it’s advertised. Does nothing at all.”

Matrix entry: `pain-002` (about 70% of probiotic bacteria dying in stomach acid)

You type:

Use secondkind-bold-organic. Give me 3 variations for pain-002.

Claude gives you 3 ideas:

Idea 1: A 5-second TikTok with a single line

The text overlay says:

70% of them are dead before they reach your gut.

That line stays locked on screen the whole time. Underneath, the video shows a clear glass jar of amber liquid (the “stomach acid”). A hand drops a probiotic capsule into it. Across 5 quick cuts, you see the capsule dissolve into nothing.

What it looks like: Same camera angle the whole time. Only the liquid changes (capsule entering → dissolving → fragments → mostly clear → just residue at the bottom).

Why it works: This pain is one shocking stat. The format compresses it into a 5-second visual proof, you literally watch the capsule die.

Idea 2: An educational Instagram carousel

A 6-slide carousel that walks through why probiotics fail biologically. Each slide is a phone-snap photo with one line of text overlaid.

- Slide 1: *“Why your probiotic isn’t working. A 3-minute explanation.”*
- Slide 2: *“You swallow 10 billion live bacteria.”*
- Slide 3: *“Then your stomach acid happens. pH 1.5-3.5. Most die in 5 minutes.”*
- Slide 4: *“Bile salts kill what’s left.”*
- Slide 5: *“The survivors don’t colonize. They pass through your gut.”*
- Slide 6: *“Postbiotics skip all three walls.”*

What it looks like: Phone-snap photos of probiotic capsules in various states (in a hand, on a counter, in a glass), with the text overlaid in the brand's serif font.

Why it works: When the customer's complaint is about *mechanism failure*, mechanism education is the answer. The carousel format lets the science breathe across slides.

Idea 3: A 7-slide carousel that calls out the industry

Each slide builds an indictment of the probiotic industry, ending with SecondKind Bold as the alternative.

- Slide 1: *"The probiotic industry is built on a lie."*
- Slide 2: *"They sell you 10 billion live bacteria."*
- Slide 3: *"They don't tell you that 70% die in your stomach acid."*
- Slide 4: *"The survivors face a colonization battle they can't win."*
- Slide 5: *"That's why you can take a \$50 probiotic for six months and feel exactly nothing."*
- Slide 6: *"That's not a problem with one brand. That's the entire delivery model."*
- Slide 7: *"We're postbiotics. We send the compounds bacteria make, already active. No survival gauntlet."* (with brand wordmark)

Why it works: When the customer feels betrayed by the category, this format channels their frustration outward, toward the industry, not the product they just tried.

Example 3: *"These messed me up so bad. It will take a while to get back to normal."*

Matrix entry: `pain-003` (about probiotics causing severe GI reactions)

You type:

Use secondkind-bold-organic. Give me 3 variations for pain-003.

Claude gives you 3 ideas:

Idea 1: A "letter" video for the customer who quit

Long text overlay on silent footage. Opens:

To the people who quit their probiotic at week two because it made everything worse

The letter validates the decision to stop. Explains the “worse before better” trap as a delivery-model failure, not a personal one. Introduces postbiotics as the model that doesn’t start a war in your gut.

What it looks like: Silent B-roll of a person at home, a hand closing a probiotic bottle, a glass of water, a couch at evening. No talking. The text carries the whole piece.

Why it works: Customers who quit usually feel like they failed. This letter says: *quitting was the right move. The model was wrong, not you.*

Idea 2: A TikTok slideshow explaining “the war in your gut”

A 6-slide slideshow with each slide explaining the conflict between live probiotics and your existing gut bacteria.

- Slide 1: *“Why your gut hates your probiotic.”*
- Slide 2: *“Probiotics are LIVE bacteria. You’re introducing strangers into an established ecosystem.”*
- Slide 3: *“Your gut already has its own.”*
- Slide 4: *“They compete. They release byproducts. They fight.”*
- Slide 5: *“That fight feels like a problem. Cramping. Bloating. Sometimes worse.”*
- Slide 6: *“Postbiotics skip the war entirely.”*

What it looks like: Phone-snap photos of probiotic capsules, a clear glass jar (the “battlefield”), a calm kitchen, text overlaid using a system font (the TikTok-native treatment).

Why it works: When the customer’s experience was physical (cramping, bloating from probiotics), the slideshow explains what was actually happening in their body. Education as relief.

Idea 3: Existing UGC footage with a new voiceover

We use creator footage we already have (from previous campaigns), strip the audio, and add a new AI voiceover that addresses this specific pain.

The voiceover says:

“There’s a moment, around week two of a probiotic, where the brand expects you to push through. Most people don’t. Most people just feel betrayed and stop. I was one of them.”

It walks through the experience of trying probiotics, getting worse, quitting, then arrives at postbiotics about 70% through.

What it looks like: Existing creator footage (hands, body shots, kitchen scenes, never their mouth on camera) with a new AI voice telling a different story than the original.

Why it works: UGC b-roll grounds the emotional confession in a real human setting. No new shoot needed, we recombine assets we already have to address new pains.

Example 4: “Mixed results for SIBO and IBS. Still experiencing cramps.”

Matrix entry: `pain-004` (about complex gut conditions like SIBO and IBS)

You type:

Use secondkind-bold-organic. Give me 3 variations for pain-004.

Claude gives you 3 ideas:

Idea 1: A 60-second AI avatar confession video

The recurring SK Bold avatar speaks directly to camera. Opens:

“I have SIBO. Which means every probiotic anyone recommended to me did the opposite of what it was supposed to do.”

She walks through years of trying probiotics, getting worse, finally understanding from her doctor that the live-bacteria model fails for dysregulated guts, then arrives at postbiotics.

What it looks like: Same AI woman as in every other AI video. Tired expression in early scenes, calmer expression by the end.

Why it works: SIBO customers feel medically isolated. A first-person confession from someone who has it lands harder than a generic post.

Idea 2: A “letter” video to the dysregulated-gut customer

Long text overlay opens with:

To the people with SIBO who've been told 'just try another probiotic'

It reframes the failure as a model problem: live bacteria don't behave well in inflamed, dysregulated guts. The letter is written like an apology from someone in the industry to someone the industry has failed.

What it looks like: Silent B-roll of a person at home, a glass of water, a calm kitchen, a hand on a stomach. No talking.

Why it works: SIBO customers have been failed by mainstream wellness advice for years. The letter format gives them a long, validating read that respects how much they've already tried.

Idea 3: An AI cartoon video

A short animated piece featuring two cartoon "probiotic" characters (Pro and Biotic) entering an inflamed gut. They look around, realize they're not welcome, and panic.

"PRO: 'Okay so the gut here is already inflamed. Everything is fighting.'" "BIOTIC: 'Are we... helping?'"

Cuts to a third character, "Posty" (a postbiotic), who just walks around the gut delivering compounds calmly. Nobody fights.

What it looks like: Obviously-AI Pixar-style cartoon characters. Cringe-by-design. (This format requires our VA to have AI animation skills.)

Why it works: Humor unlocks an objection earnest content can't reach. SIBO customers have been preached at for years, a cartoon that makes them laugh is a relief.

Example 5: *"Heavy on the not being bloated, finally."*

Matrix entry: `love-001` (a real customer comment expressing relief after bloating disappeared)

You type:

Use secondkind-bold-organic. Give me 3 variations for love-001.

Claude gives you 3 ideas:

Idea 1: Existing UGC footage with a reflective voiceover

We pull creator footage from our library and add an AI voiceover that delivers a “the version of you that disappeared” monologue.

The voiceover says:

“There’s a version of you that didn’t think about her stomach. Who could eat dinner and not regret it. Who looked the same at 7pm as she did at noon.” “You assumed she was gone forever. Turns out she was waiting for your gut to actually work.”

What it looks like: Existing UGC, hands buttoning jeans, hands chopping vegetables, a woman walking (filmed from behind). The AI voice carries the elegiac tone.

Why it works: This love is about *return*, not discovery. A reflective voiceover captures that better than a sales pitch.

Idea 2: A phone-snap product post

A single Instagram post: an AI-generated photo of the Gut Balance bottle on a kitchen counter alongside a coffee mug and a piece of half-eaten toast.

Caption (in your IG post, not on the image):

the only thing I added this month

That’s it. No hashtags. No “shop now.”

What it looks like: A casual phone-snap photo that looks like a friend posted it. The product is visible but not foregrounded.

Why it works: The simplest possible post. The customer’s transformation speaks through the product appearing as part of an ordinary morning.

Idea 3: A “letter” video to the post-bloat customer

Long text overlay opens:

You don’t realize how loud the bloat was until it stops.

It walks through what disappears when bloating goes away, the constant body-checking, the avoidance of evening plans, the dread of getting dressed. Then arrives at postbiotics as the mechanism behind the

relief.

What it looks like: Silent B-roll of a person moving through their day freely, opening a closet, sitting at a dinner table, taking a deep breath.

Why it works: The relief is socially liberating, not just physical. The letter format earns space by speaking directly to that feeling.

Example 6: *“Transparency and rigorous science are what truly build trust.”*

Matrix entry: `love-003` (customers loving SK Bold’s clinical transparency)

You type:

Use secondkind-bold-organic. Give me 3 variations for love-003.

Claude gives you 3 ideas:

Idea 1: An Instagram carousel showing every claim and the study behind it

A 6-slide carousel titled *“Every claim. Every receipt.”*

Each slide pairs one specific SK Bold claim with the study that proves it: - Slide 1: *“Every claim. Every receipt. The science behind Gut Balance.”* - Slide 2: *“Bereum: 84-day GI symptom improvement study.”* - Slide 3: *“Totipro: 30-day bowel regularity outcomes.”* - Slide 4: *“EpiCor: 10+ years of immunity data.”* - (etc.)

What it looks like: Phone-snap photos of clinical settings (a notebook, a stack of papers, a desk lamp) with the claim/study text overlaid.

Why it works: Customers who love transparency want to see it, not hear it promised. This carousel is the demonstration.

Idea 2: A 7-slide carousel calling out the wellness industry

Each slide builds the case that the supplement industry runs on vibes, not science.

- Slide 1: *“The supplement industry runs on vibes.”*
- Slide 2: *“Most labels list ingredients without doses.”*

- Slide 3: *“Without studies. Without sources.”*
- Slide 4-6: more specific failures
- Slide 7: SK Bold reveal, three peer-reviewed studies, dose-specified, source-cited

Why it works: Take the customer’s trust value and turn it into a category critique. SK Bold becomes the only brand keeping receipts.

Idea 3: A bold statement post

Single Instagram square:

“We’re not wellness theater. We’re three peer-reviewed studies.”

Below: a single line for each study (Bereum, Totipro, EpiCor) with their core outcome.

What it looks like: Clean phone-snap of a desk with the brand statement laid over a clear area of the photo.

Why it works: Hard pivot from “wellness brand” to “clinical brand.” Disowns the soft-wellness category in one stroke.

Example 7: *“I wish there was a probiotic-category product that actually survives the trip to the gut.”*

Matrix entry: wish-002

You type:

Use secondkind-bold-organic. Give me 3 variations for wish-002.

Claude gives you 3 ideas:

Idea 1: An AI cartoon video

A short animated video. A cartoon probiotic character named “Barry” nervously enters a stomach. Cuts to gravestones.

"Barry didn't make it. Neither did 6.9 billion of his friends."

Then cuts to "Posty" (a postbiotic), who arrives intact and starts working immediately.

What it looks like: Obviously AI-rendered Pixar-style cartoon. (Requires VA's animation skill.)

Why it works: The wish is about survival. The cartoon makes the death of probiotics visible and funny, turning an invisible biology problem into something you can watch and laugh at.

Idea 2: A 5-second TikTok with one line

Text on screen says:

ten billion in. none out.

The video shows a hand dropping probiotic capsules into a glass of amber liquid. Across 5 quick cuts, the capsules dissolve into nothing.

Why it works: The pain is invisible, bacteria die where you can't see. This format makes the invisible visible in 5 seconds.

Idea 3: An Instagram carousel walking through the journey

A 5-slide carousel: *"What happens to a 10-billion-CFU probiotic between your mouth and your gut. Slide through →"*

- Slide 1: *"You swallow 10 billion bacteria."*
- Slide 2: *"Your stomach acid kills 7 billion in 5 minutes."*
- Slide 3: *"Bile salts in your small intestine kill most of what's left."*
- Slide 4: *"The few that reach your colon get out-competed by your existing gut bacteria."*
- Slide 5: *"Postbiotics skip the journey. They're the compounds bacteria make, already active when you take them."*

Why it works: For customers who want the mechanism explanation, this is the technical version of the cartoon.

Example 8: “*I wish gut supplements didn’t make things worse before they made things better.*”

Matrix entry: wish-004

You type:

Use secondkind-bold-organic. Give me 3 variations for wish-004.

Claude gives you 3 ideas:

Idea 1: A “letter” video to the customer who quit

Long text overlay opens:

You quit at week two. You weren’t wrong to.

The letter validates the decision to stop. Walks through why probiotics make things worse first (live bacteria fighting your existing gut flora). Arrives at postbiotics as the model that doesn’t start a war.

What it looks like: Silent B-roll of a person at home, a closed laptop, a cup of tea, a kitchen at evening.

Why it works: Customers who quit usually carry shame about it. The letter says: *quitting was rational. The model was wrong, not you.*

Idea 2: An Instagram carousel explaining the “war”

A 6-slide carousel: “*Why probiotics get worse before better, and why ours doesn’t.*”

- Slide 1: “*Probiotics are LIVE bacteria.*”
- Slide 2: “*Your gut already has its own.*”
- Slide 3: “*They compete. They release byproducts. They fight.*”
- Slide 4: “*That’s why probiotics ‘get worse before better.’*”
- Slide 5: “*Postbiotics skip the war.*”
- Slide 6: SK Bold mechanism reveal

Why it works: Mechanism education for the customer who needs to know *why* before they’ll try again.

Idea 3: A 60-second AI avatar confession

The recurring AI avatar tells a personal story:

"I quit gut supplements entirely for a year. Not because I gave up. Because they were actively harming me."

She walks through trying multiple probiotics, getting worse with each one, quitting, then arrives at learning about postbiotics.

What it looks like: Same AI woman as in every other AI video. The quitter becomes the strategic decision-maker.

Why it works: Turns the act of quitting from a failure into a smart move. Builds trust through honesty.

Example 9: *"You took three different probiotics. You still feel this way. That's not a you problem."*

Matrix entry: `hook-002`

You type:

Use secondkind-bold-organic. Give me 3 variations for hook-002.

Claude gives you 3 ideas:

Idea 1: A "letter" video built around this exact hook

Long text overlay opens with the matrix hook directly:

Listen, to the women on your third probiotic, still feeling like a stranger in your own body.

The letter walks through the three-probiotic journey, explains why each one failed at the same biological wall, and ends with postbiotics.

Why it works: The hook is already a great opening line. This format extends it into a full piece.

Idea 2: A 60-second AI avatar video

The AI avatar narrates her three-probiotic journey. Scene 2 shows her opening a drawer with three different probiotic bottles visible.

“Three brands. Two years. Still bloated by 7pm.”

Why it works: First-person register makes the “you” of the hook into “she,” which the viewer recognizes as themselves.

Idea 3: A 5-second TikTok visual proof

Text on screen says:

three probiotics in. still bloated.

The video shows the same kitchen counter across 5 quick cuts. In each cut, a different probiotic bottle gets opened. By the last cut, four empty bottles are lined up on the counter.

What it looks like: Same camera angle the whole time. Only the bottles change.

Why it works: The hook compresses to a number. Three. The visual shows the three (and the fourth empty bottle as the punchline).

Example 10: A quick weekly engagement post

Sometimes you just need a fast post that drives comments. No deep pain needed, just a low-friction question.

You type:

Use secondkind-bold-organic. Give me 3 quick engagement post ideas for this week.

Claude gives you 3 ideas:

Idea 1: A number question (Instagram feed post)

A clean Instagram square asking:

“How many probiotics have you tried?”

That’s the whole post. SK Bold wordmark in the corner.

What it looks like: A phone-snap photo of a medicine cabinet open, lined with supplement bottles, with the question laid over the upper part of the photo.

Why it works: The answer is a single number. Three seconds to comment. The phrasing assumes she’s tried multiple, which validates her experience without saying so.

Idea 2: An Instagram Story poll

A vertical Story with the native IG poll sticker. The question:

“Bloated by lunch or bloated by dinner?”

Options: *By lunch / By dinner*

Why it works: Zero typing. Single tap. And it tells us when bloat hits hardest for our audience, useful research for future content.

Idea 3: A “spot the lie” Instagram post

A single square that says:

“Two of these are true about probiotics. One is propaganda. Pick the lie.”

1. Most probiotic bacteria die in stomach acid 2. Taking them with food improves survival 3. Live cultures must colonize to do anything

(The lie is #2, overstated and strain-dependent.)

Why it works: Comment-bait that’s actually educational. Reveal the lie in the comments after engagement builds.

Going Deep, what happens when you pick one idea

After Claude gives you the 3 ideas above, you pick one and ask for the full details. Here's what that looks like.

Continuing from Example 1. You picked Idea 1 (the bold "We're not probiotics" post) and you type:

Go deep on #1. I need full copy and visuals.

Claude gives you the full production package:

THE POST

Headline (large, brand serif font):

We're not probiotics. We don't want to be.

Body (smaller, brand sans-serif, 3 lines):

Most probiotics don't survive your stomach acid. The ones that do don't colonize. We send the compounds your gut actually uses, already active.

Bottom-right corner: SK Bold wordmark. No "shop now," no link, no hashtags.

THE VISUAL

A phone-snap photo of a kitchen counter at morning. The text sits in the upper-left clear area of the photo.

The exact instruction to paste into Higgsfield:

"Shot on iPhone, candid. A clean wooden kitchen counter at morning, soft natural light from a window off-frame, mostly empty counter with a single ceramic mug in the bottom-right corner, large clear/negative space in the upper portion of the frame, lived-in domestic feel, 1:1 aspect ratio, slightly imperfect framing. No text, no captions, no overlays, no graphics, no typography."

Claude will also give you alternative backgrounds (bathroom counter, nightstand, open journal on desk) so you can rotate the visual across posts.

THE STEPS

1. Open Claude. Get the copy + Higgsfield prompt above.
 2. Paste the Higgsfield prompt into Higgsfield. Generate the photo. Download it.
 3. Open Canva. Use the brand template. Drop the photo in.
 4. Add the headline (Caslon Condensed) and body (Neue Montreal) in the clear upper area of the photo.
 5. Add a small yellow highlight on the word *compounds*.
 6. Place SK Bold wordmark bottom-right.
 7. Export, post to Instagram.
-

CHECKS CLAUDE WILL HAVE ALREADY DONE

- Voice sounds right (confrontational, science-armed, not wellness-influencer)
 - No prohibited words (no *miracle*, *journey*, *holistic*, *transform*, etc.)
 - No “shop now” CTA
 - Doesn’t name a competitor, attacks the category, not Seed or Ritual
 - Background photo has a clear area for the text
-

How to use these examples

For practice: Read through a few and try to predict what Claude would suggest before reading the answer. You’ll quickly get a feel for which kinds of content suit which kinds of customer complaints.

For your own week: When you sit down to make content, open `matrix.md`, pick a real customer complaint, ask Claude for variations, and pick one to go deep on. The flow is exactly what these examples show.

If you ever want more examples: Pick any matrix entry and ask Claude for variations. The skill works the same way for every entry, you’ll get 3 ideas back, you pick one, you ask for the full details.
