

SecondKind Bold

Organic Content Strategy

A complete approach to building the organic ecosystem that supports your paid advertising, and reduces your CPMs along the way.

Executive summary

We've built a complete organic content production system for SecondKind Bold. It produces 10-13 pieces of brand-aligned content per week, across TikTok, Instagram Reels, Instagram feed, and Stories, without a single shoot day, without hiring UGC creators, and without compromising the brand voice you've built.

The system is grounded in current research about how Meta's algorithm reads brand quality, draws on the proven content frameworks of Sarah Levinger and Dara Denny, and produces every piece using AI tools (Higgsfield, ElevenLabs, CapCut) calibrated to SecondKind Bold's confrontational, science-armed voice.

This document explains the strategy, what you'll see in your feed each week, and the brand-voice safeguards we've locked in.

Why we've separated organic from paid

Sarah Levinger's research on Meta's algorithm is clear: **your ad account is built to convert. When you force it to do awareness too, both jobs perform worse.**

The implication is structural. Most brands try to make their paid ads do everything, introduce the problem, build the brand, prove the science, and close the sale. Meta's optimization can't serve all four at once. The result is rising CPMs, declining ROAS, and a brand that nobody recognizes outside of ad units.

The fix is to push the awareness layer of the funnel, the **trigger** (making someone realize they have the problem) and **exploration** (learning about the space and the solutions), *out of paid ads and onto organic*. When organic does that job, paid is free to do what it does best: convert people who are already aware.

What you get from this split:

- **Lower CPMs.** Meta reads consistent organic posting as a signal of brand quality and rewards your ad account for it.
 - **Faster conversion.** People who arrive at your ads via warmed-up organic exposure convert at higher rates than cold traffic.
 - **Recall that compounds.** Organic builds long-term brand memory. Paid drives action *because* of that memory.
 - **Lower production costs.** Organic now produces 10x the content paid does, at a fraction of the cost per piece, because we don't need shoot days.
-

How the system works

Three components, working together:

1. The customer matrix

We mapped the SecondKind Bold customer into 52 distinct entries grouped by type:

- **15 pains**, what customers complain about
- **12 loves**, what they love about the product
- **10 wishes**, gaps in the market they wish existed
- **15 hooks**, pre-approved hook angles drawn from real customer language

Each entry is sourced from real customer voice (Reddit, TikTok comments, Trustpilot, Amazon reviews, IG comments, your own product reviews) and tagged with the psychology trigger that makes it resonate.

Every piece of content we make traces back to a specific matrix entry. We don't invent topics. We address things your customers are actually saying.

2. Ten production recipes

A "recipe" is a way to make a piece of content without a shoot. Different recipes serve different purposes, some are emotional long-form, some are quick scroll-stoppers, some are educational, some drive engagement. We pull from these ten:

Recipe	What it makes
Love letter	A long text monologue over AI B-roll. Emotional, persuasive, deep.

Recipe	What it makes
POV short	A 5-second video with 10 words of text and a locked-camera variation pattern.
David & Goliath	A piece that calls out the probiotic industry, then introduces postbiotics.
Pixar AI animation	Outrageous AI cartoon characters acting out the brand narrative.
"We're not [X]"	A bold brand-positioning piece, <i>"We're not probiotics. We don't want to be."</i>
UGC cut-up + AI voiceover	Existing creator footage stripped of audio, layered with new AI voiceover.
Static educational card	Mythbusting carousel with the science behind postbiotics.
Native AI product shot	Phone-snap-style product photo with a casual caption.
AI UGC influencer	Hyperrealistic AI avatar speaking a script. Same recurring character every video.
Engagement prompt	Question, poll, or quiz designed to drive comments and replies.

Every recipe respects the same brand-voice safeguards (see below).

3. AI tools doing the production

No shoot days. No creators to book. Production uses:

- **Higgsfield**, generates the visual content (images, video, recurring AI character via Soul ID)
- **ElevenLabs**, generates AI voiceovers in the brand-matched tone
- **CapCut / Canva**, assembles the final piece and adds text overlays

Our team takes the strategy from the matrix, generates the assets through these tools, and ships the finished content. Total production time is a fraction of what shoot-based UGC would require.

Brand voice safeguards, what we'll never do

The fastest way to ruin a brand on organic is to sound like every other wellness influencer. We've built explicit rules into the system to prevent this.

Prohibited words

Every piece is checked against a list of words and phrases that violate the SecondKind Bold voice:

- **FDA compliance:** *cure, treats, heals, prevents, reverses, eliminates*
- **Anti-hype:** *miracle, magical, revolutionary, life-changing, game-changer, guaranteed, amazing, incredible*
- **Wellness-influencer cheese:** *journey, ritual, find your best self, transform your, unlock your, embrace your, holistic, wellness lifestyle*

These words are never used. Ever.

Brand-intro-delay rule

The SecondKind Bold brand does not appear in the first 30% of any organic piece. Content earns the brand reveal by delivering value first, explaining the science, validating the customer's pain, dismantling industry myths, before the product appears.

This single rule is the difference between content that builds your brand and content that gets scrolled past.

No “shop now” CTA

Organic content has no calls to action. No “buy now,” no “link in bio,” no hashtags in the visual. The brand mark in the corner is enough. If someone wants to act, they click your profile, which is exactly the user behavior Meta's algorithm rewards.

Native-first visuals

The default visual treatment is a native AI phone-snap setting background (kitchen counter, bathroom counter, nightstand, desk) with text overlaid. Premium editorial layouts, your Snow White brand backgrounds with Caslon Condensed headlines, are used occasionally for high-design moments, but the daily rhythm leans native. This is critical: content that looks like an ad gets scrolled. Content that looks like a friend's post gets read.

Category, never competitor

We attack categories (“probiotics”) and broken beliefs (“just drink water will fix your gut”), never specific competitor brands by name. This is both a legal safeguard and a brand-tone choice. Brand-bashing reads as bitter; category-bashing reads as confident.

What you'll see each week

A typical week produces 10-13 pieces of content across all surfaces. The mix:

Cadence	What
Daily (TikTok + IG Reels)	POV shorts, native product shots, UGC cut-ups, the daily backbone
Weekly (1× each)	Love letter, “We’re not probiotics,” educational carousel, AI UGC influencer video, engagement prompt
Bi-weekly	David & Goliath video or carousel
Monthly	Pixar AI animation (special, when the moment calls for humor)
Stories (2-3×/week)	Polls, this-or-thats, “anyone else” prompts

The two foundational rules we follow:

1. **At least one feed post per day on TikTok and IG Reels.** Meta reads inconsistency as low brand quality. Better to post a low-effort piece daily than a perfect piece weekly.
2. **Mix recipes across the week.** Same recipe every day kills recall. Same recipe never used breaks the recall engine. The rhythm sits between those.

Sample content

Two examples drawn directly from your customer matrix.

Example A, “We’re not probiotics. We don’t want to be.”

A static IG post, addresses customer pain around probiotic efficacy plateaus.

Headline: *We’re not probiotics. We don’t want to be.*

Body: Most probiotics don’t survive your stomach acid. The ones that do don’t colonize. We send the compounds your gut actually uses, already active.

Visual: AI-generated phone-snap of a kitchen counter at morning, mostly empty with a single ceramic mug, soft natural light. Headline sits in the upper-left clear area of the photo. Bottom-right corner: SecondKind wordmark. No CTA.

This piece does several things at once: it positions the brand against the entire probiotic category (not a specific competitor), it explains the mechanism in three lines, and it ends without asking the reader to buy. The brand earns its place by being the answer to a problem the headline names.

Example B, TikTok POV Short

Addresses the customer pain *“look 3 months pregnant by 7pm.”*

Text overlay (locked across all cuts): *9am vs 7pm. same body. same food.*

Visual: Locked camera on a bathroom mirror. Across 5 quick cuts (~1 second each), the same woman appears in the same fitted t-shirt at progressing times of day, 9am (flat stomach), noon (slight puff), 3pm, 5pm (visibly distended), 7pm (switched to a loose shirt entirely).

The text never moves. The visual change across cuts, the body slowly being defeated by the day, is what stops the scroll. Five seconds. No brand visible. The pain alone is the value.

A follow-up piece later in the week introduces postbiotics as the answer. The audience has already self-identified.

What success looks like

Organic content is a recall-building game, not a click-driving one. Success metrics over the first 90 days:

- **Consistent daily posting cadence**, never a missed day on TikTok or IG Reels
- **Comment volume growing**, engagement prompts surface VOC and build social proof
- **Recall improvement**, measured via comment sentiment and follower growth, not click-through rate
- **Lower paid CPMs**, measurable within 6-8 weeks as Meta’s algorithm reads the organic signal
- **Higher ad ROAS**, paid traffic that arrives via organic awareness converts at higher rates

We’ll report monthly on these metrics, with clear attribution between organic activity and paid performance.

Operating model

You won’t see us asking for shoot bookings, talent fees, or per-piece content approvals. The system is designed to operate at speed:

- **Your team approves the strategy.** This document is the strategy.
- **Our team produces against it.** Every piece traces back to a matrix entry. We don’t invent topics outside the matrix.

- **You see the work in your feed.** No middle-of-production reviews. Approvals happen at the strategy level (this document, the matrix, the recipes), not the piece level.

This is the only way to sustain 10-13 pieces of organic content per week. Per-piece approval would bottleneck the cadence Meta requires.

What we'll send you each month: a performance report, a sample of pieces from the past month with the matrix entries they address, and any matrix updates we recommend based on what's surfaced in the comments.

What's next

If you're aligned with this approach, we're ready to ship the first week of content. We'll send you:

1. The first week's content calendar (which matrix entries we're addressing, which recipes we're using)
2. The set-up confirmation for your canonical AI avatar (a one-time setup that becomes the recurring face for our AI UGC influencer pieces)
3. The first published pieces, typically within 5 business days of approval

Questions, feedback, or matrix entries you'd like prioritized, let us know.
